

Policies on Conflicts of Interest, Duties of Author, Copyright and Authorship, Human and Animal Rights, Informed Consent, and Fundamental Errors for *Immunohematology*

Immunohematology, Journal of Blood Group Serology and Molecular Genetics (herewith referred to as “*Immunohematology*”) maintains these policies to ensure that the mission, vision and values of the American Red Cross are upheld in all aspects of manuscript submission, subscription, and oversight. These policies apply to all editorial and production staff, to members of the Editorial Board, to the selected peer reviewers and to contributing authors.

Decisions and Management of Editorial Conflicts of Interest

All *Immunohematology* journal editorial staff are required to comply with the Code of Business Ethics and Conduct of the American Red Cross which (i) prevents them from seeking financial advantage or gain, to improperly influence to confer a financial benefit on any person, corporation or entity in which the individual has a significant interest or affiliation, or to operate or act in a manner that creates a conflict of interest; (ii) requires them to disclose any conflicts of interest and recuse themselves during deliberations and decisions in connection with the matter; (iii) requires them to maintain the confidentiality of any confidential information available to them as a result of their position; and (iv) operate or act in any manner that is contrary to the best interest of the American Red Cross.

Those acting within the scope of their position with *Immunohematology* may not use their respective position in a manner that permits them to achieve monetary, material benefit, or other personal gain for themselves or family members, including domestic partners.

Confidential information includes, but is not limited to, information that is proprietary to or the intellectual property of *Immunohematology*; unpublished data and manuscript; other information that has not been authorized for disclosure; has not become public and that is obtained through an individual’s relationship with *Immunohematology*.

Duties of Authors

Authors of manuscripts of original research should present an objective for their research, methods and materials used in the research, an accurate account of the work performed, the obtained results, and a conclusion with an objective discussion of its significance. Underlying data should be complete and accurately presented in the manuscript. A manuscript should contain enough details and references to permit others to duplicate the research. Fraudulent or knowingly inaccurate statements constitute unethical behavior and are cause for rejecting a manuscript.

Review, case report, and other manuscript types should also contain accurate and objective information with appropriate references to substantiate statements; editorial works (opinion) should be clearly identified as such.

The authors should ensure that their manuscript is written in its entirety by them and all works or words of others are appropriately quoted or cited. Plagiarism can exist as submitting another’s manuscript as their own, copying or paraphrasing large parts of another’s publication without proper citation, claiming another’s data as their own, or as any type of untruthful use of information and is cause for rejecting a manuscript.

All work performed by others must be referenced and any publications that have contributed to the authors' research must be cited. All non-published information used, e.g. conversations and discussions, must only be used with permission from the source.

A conflict of interest may exist when an author (or the author's institution or employer) has financial or personal relationships or affiliations that could influence (or bias) the author's decisions, work, or manuscript. All sources of financial support for the project should be disclosed. Examples of potential conflicts of interest which should be disclosed include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grant or other funding. All authors are required to report potential conflicts of interest including specific financial interests relevant to the subject of their manuscript in the Acknowledgment section of the manuscript and in the Disclosure of Potential Conflicts of Interest section of the Authorship Form. Note: These forms will be distributed after a manuscript has been submitted, but authors should also include conflict of interest disclosures in the Acknowledgment section of the submitted manuscript.

Copyright and Authorship of the Manuscript

One of the goals of *Immunohematology* is to provide an informal forum for blood bankers to share new, interesting, exciting information and to make it available to readers in a relatively short time. By copyrighting all contributions to *Immunohematology*, the Red Cross can provide protection for the author's work and data from unauthorized use of republication.

The copyright consists of all rights of whatever kind now or hereafter protected by the copyright laws of the United States and of foreign countries, in all languages and forms of communication

Upon submitting a manuscript for publication in *Immunohematology*, the corresponding author should ensure that all those who made significant contributions to the manuscript are listed as co-author and that all co-authors have seen and approved the final version of the manuscript and have agreed to its submission for publication.

All authors/co-authors are required to complete and submit a Publishing Agreement that is part of the journal's electronic Authorship Form. This agreement will be distributed via email notification to all authors and co-authors upon submission of the manuscript by the corresponding author.

In this agreement, each author or co-author will provide written copyright ownership to the American National Red Cross for their manuscript, or indicate that they are employed by a federal government, or indicate that they are an employee of an institution that considers the work in the manuscript a work for hire, in which case an authorized representative of that institution will assign copyright or a publication license on the author's behalf when their contribution is published in *Immunohematology*.

Published manuscripts become the permanent property of the American National Red Cross and may not be published elsewhere without written permission. The authors have the right to reprint the contribution subject to the written permission of The American National Red Cross, and further subject to the placement of an appropriate credit line reciting copyright protection in the Red Cross. Unauthorized use of the journal's name, logo, or any content for commercial purposes or to promote commercial goods and services (in any format, including print, video, audio, and digital) is not permitted.

Acceptance of a manuscript for publication in *Immunohematology* gives The American National Red Cross the right to make first publication of the work and to republish it, serially or otherwise, in English and any other language and in any medium, and in full, part, or abstract forms.

Human and Animal Rights

When reporting studies involving animals, authors should indicate whether institutional and/or national standards for the care and use of laboratory animals were followed in accordance with the International Association of Veterinary Editors' Consensus Author Guidelines on Animal Ethics and Welfare (<https://www.veteditors.org/consensus-author-guidelines-on-animal-ethics-and-welfare-for-editors>).

When reporting studies involving human subjects, authors should indicate whether the procedures followed, including the conduct of the study and reporting of human research, were in accordance with the ethical standards of the responsible committee (Institutional Review Board or Institutional Ethical Committee) and/or with the Helsinki Declaration of 1975, and its revisions. (www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/).

Informed Consent

Patients have a right to privacy that should not be violated without informed consent. Identifying information, including names, initials, or hospital numbers, should not be published in written descriptions, photographs, or pedigrees unless the information is essential for scientific purposes and the patient gives written informed consent for publication. Informed consent must be obtained if there is any doubt that anonymity can be maintained.

Patients, who are minors or of a vulnerable population, must have a parent, guardian, or other legal representative provide written informed consent for the publication, if anonymity cannot be maintained as described above. If able, the patient should also provide written attestation that they understand and approve the publication.

Fundamental Errors in Publications

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's responsibility to notify the managing editor of *Immunohematology* to correct the error and publish an appropriate erratum.
